

How to use the command line to install the DeltaPDF:

Open a cmd in *elevated* mode and go to the folder that contains the msi file. In order to install the msi in silent mode you need to use this command:

```
msiexec /i DeltaPdfInstall.msi /qn
```

You can provide the options in form of *OPTION=VALUE* in the command to overwrite the default behavior. Here are the options:

- Installation directory: **TARGETDIR**  
msiexec /i DeltaPdfInstall.msi /qn targetdir=" C:\Program Files\DeltaPDF"
- Installation scope: **ALLUSERS**  
If you need to install the product for all users, use ALLUSERS=1; otherwise, use ALLUSERS=""  
msiexec /i DeltaPdfInstall.msi /qn allusers=""
- Installation option: **INSTALL\_OPTION**  
This allows you to control the type of the shortcut to put on the desktop. The value FULL refers to the full version and the FREE refers to the free viewer  
msiexec /i DeltaPdfInstall.msi /qn install\_option=free

For example, this command installs the product in default location for all users as the free viewer:

```
msiexec /i DeltaPdfInstall.msi /qn allusers=1 install_option=free
```
